TRANSPORT & LASHING

Robust and safe lifting solutions for a demanding industry

In road, maritime and rail transport, the safety and efficiency of lifting and lashing operations are essential. Whether loads are heavy, bulky, long or irregularly shaped, they must be handled and secured under conditions that can often be challenging: vibration, humidity, wind, temperature fluctuations and more.
CODIPRO supports transport, logistics and handling professionals with robust, versatile and certified equipment designed to ensure safe lifting and reliable lashing, even in the most demanding environments.

Lifting & lashing: two functions, one solution

Did you know that most CODIPRO lifting rings can also be used for lashing applications? Thanks to dual markings indicating both the WLL (Working Load Limit) and the LC (Lashing Capacity) in daN, these lifting rings become certified anchoring points for securing loads during transport.

The benefits of this versatility:

- One piece of equipment for two applications: saving space and reducing the amount of equipment to manage
- Minimal additional cost for dual functionality
- Fast availability across the CODIPRO product range
- Lashing certificates available on request

Compliant with industry requirements, lifting rings used in lashing configurations provide a safety factor of 2.

Recommended products for transport and lashing applications

WE.DSR / WE.DSS:

Perfectly suited to transport operations, the WE.DSR / WE.DSS can be welded directly onto a structure to create a permanent and highly resistant anchoring point. It combines lifting and lashing functions while ensuring maximum safety.

Key features:

- WLL: from 2 to 10 tonnes
- 360° rotation and 180° swivel under load
- CE, WLL and tightening torque markings
- Safety factor of 5:1

Please note: welding must be carried out by a qualified professional in accordance with EN 287-1.

TRANSPORT & LASHING

QLR (Quick Lift Ring)
Ultra-fast installation and removal make the QLR ideal for frequent loading and unloading operations.

GRADUP lifting rings
Highly resistant lifting rings that ensure optimal load alignment, particularly useful when space inside containers or transport vehicles is limited.

Custom lifting beams (LIFTEUROP)
Designed for lifting long or irregular loads, with multiple lifting points to ensure balanced load distribution.

Your benefits

- **Time savings** during loading and unloading operations
- **Enhanced safety** throughout transportation
- **Reduced risk** of damage to **sensitive components**
- **Compatibility** with various types of vehicles and containers
- **Customisable and certified** solutions for every application

Whether you transport industrial equipment, steel structures or high-value goods, our teams are ready to help you identify the most suitable lifting and lashing solution for your needs.
