Luxembourgish swivel lifting rings specialist, Codipro, has unveiled its new traceability management tool, the Coditracer, in order to reinforce security, traceability and confidentiality.

The Coditracer, which was created in partnership with convergent cloud, ICT and telecom services firm, Telindus, ensures the traceability of its rings during each step of the production process, from raw material, to assembly, to distribution and then use.

Security and confidentiality of information are guaranteed through the basis of blockchain technology, developed by Telindus.

“Each ring has a traceability number,” explained Christophe Losange, Codipro Director. “This number simply has to be entered into the software to access all information related to the rings, such as the instruction manuals, technical data sheets or the certificates of conformity. Thanks to CodiTracer, clients will have all the necessary information at hand to guarantee their safety.”

According to Losange, the Coditracer reinforces security and traceability while being ecological, given the amount of paper and plastic saved through the process: “The software will enable Codipro to reinforce its status as a specialist of swivel lifting rings and its distributors to better know their markets.”

Codipro now offers a seven-year warranty on all its rings, on condition that clients request this through the app, which is available on Google Play and from the App Store. Coditracer is also accessible via the firm's [website](#), with commissioning scheduled for 6 July.

Since its takeover in 2004 by the shareholders of No-Nail Boxes and its move to Wiltz, Luxembourg, Codipro has been growing steadily, posting a sales revenue of €10,115,000 in 2019.
